### BITCOIN

Bitcoin is a form of digital currency, created and held electronically. No one controls it. Bitcoins aren't printed, like dollars or euros - they're produced by people, and increasingly businesses, running computers all around the world.

They're produced by people, and increasingly businesses, running computers all around the world.

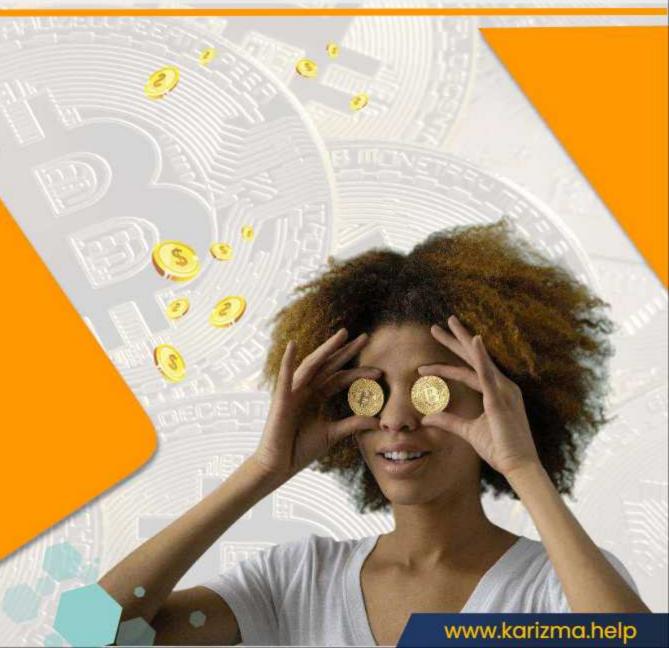

- >> Worlds 1st Cryptocurrency Crypto Mining
- Invented and launched by Satoshi Nakamoto
- Launched On 09 Jan / 09
- >> Total Supply only. 21M BTC (Limited)
- Mining Algorithm Used: POW (Proof Of Work)

# **How Bitcoin Works**

Bitcoin is the world's first completely open payment network which anyone with an internet connection can participate in. Bitcoin was designed to be used on the internet, and doesn't depend on banks or private companies to process transactions.

One of the most important elements of Bitcoin is the blockchain, which tracks who owns what, similar to how a bank tracks assets. What sets the Bitcoin blockchain apart from a bank's ledger is that it is decentralized, meaning anyone can view it and no single entity controls it.

## The Benefits of Bitcoin

#### Bitcoin is decentralized

The Bitcoin network is distributed globally among many thousands of nodes (computers) and millions of users where you don't have to rely on trusted third-parties. The decentralized nature of Bitcoin also makes it extremely antifragile. In other words, it's next to impossible to destroy the Bitcoin network.

# Bitcoin has a limited supply

There will only ever be 21 million bitcoins created, and they're generated at a predictable rate over the next 100 years. This makes Bitcoin a scarce commodity. By comparison, fiat currencies like the dollar have an unlimited supply. While the purchasing power of the dollar decreases year after year, the value of Bitcoin continues to increase.

#### Bitcoin is real money

Bitcoin is used around the world to pay for things such as coffee, food, electronics, travel, and more. Some even like to call it magical internet money because of all its amazing properties, and its ability to not be double-spent.

#### Bitcoin is real money

All information regarding the Bitcoin money supply is available for anyone to view on the blockchain.

Every transaction made with Bitcoin is available for anyone to see too, although personal information is hidden. This radical transparency helps ensure that Bitcoin remains open and free from corruption.

# WHAT IS

## PEER-TO-PEER HELP BENEFIT?

#### **GLOBAL MARKETPLACE**

One advantage of using a local P2P Bitcoin exchange is that it gives you access to a global market.

#### **MULTIPLE PAYMENT METHODS**

Traditional exchanges may not offer as many payment options as P2P exchanges. Binance P2P.

#### PERSONALIZED OFFERS

Sellers have complete control over the selling price and how much they are willing to sell per transaction.

# The Benefits of Investment in Bitcoin

Like other cryptocurrencies, Bitcoin's properties make it unique and valuable. Some of Bitcoin's characteristics that make it popular among investors include Decentralized, Transparency, Anonymity and Efficient Transactions. To determine whether investing in Bitcoin is a good choice, On the other side, there are rewards.

Three factors that make Bitcoin a relatively safe investment -

01

Well-known organizations buy
Bitcoin as an investment
based-asset. Public
companies such as
MicroStrategy, Galaxy Digital
Holding, Grayscale, and
Coinbase have some of the
biggest Bitcoin portfolios. As of
2022, public companies held
about 266,417 BTC.

02

Some countries buy Bitcoin as treasury deposits. It's estimated that approximately 8% (1.6 million BTC) of all Bitcoin in the world is owned by governments and companies. Some countries worth mentioning include Bulgaria, Ukraine, El Salvador, and Finland.

03

Despite Bitcoin being more volatile than gold, some traditional investors consider it a great hedge against inflation and a fiat-based economy.
